Environmental Policy

As Celiko, a company that has been providing consumers with the highest-quality products for years – including freeze-dried fruit, gluten-free and cocoa-based products – we are fully aware that our raw materials come directly from nature. That is why protecting the environment is not merely a legal requirement for us, but the foundation of our business strategy and a moral obligation to future generations.

We strive to operate in a sustainable manner, harmoniously combining technological development with care for the ecosystem. This idea formed the basis for the implementation of an Environmental Management System based on the PN EN ISO 14001:2015 standard.

Our Strategic Commitments

Celiko management and employees are committed to continuously improving our environmental protection efforts through:

Energy Efficiency and Emissions Reduction

Given the specific nature of drying processes, which are energy-intensive, optimizing utility consumption is a priority for us.

1. We invest in a modern machine park with high energy efficiency ratings.
2. We monitor electricity and gas consumption, aiming at a systematic reduction of the carbon footprint per kilogram of finished product.
3. Where possible, we implement solutions based on heat recovery.

Responsible Waste and Packaging Management

We strive toward a Circular Economy (CE) model.

1. Reduction: We minimize the amount of plastic in our packagings while maintaining full food safety and shelf life.
2. Recycling: We design packagings (for bars, teas, freeze-dried products) to be easily recyclable.
3. We sort post-production waste with the utmost care, sending it to certified recipients for recycling.

Water and Wastewater Protection

Water is a valuable resource in the food industry.

1. We use closed-loop water systems wherever permitted by technological and sanitary requirements.
2. We ensure that post-production wastewater meets environmental standards before discharging it into the sewer system.

Sustainable Supply Chain

The quality of our products begins with the supplier.

1. We prefer suppliers of raw materials (fruits, vegetables, grains) who follow good agricultural practices and respect biodiversity.
2. We optimize logistics to reduce the distance raw materials travel to the plant (“food miles”), supporting local growers whenever possible.
3. We manufacture products whose raw materials do not require extensive processing.

Compliance and Awareness

To achieve the above objectives, we declare:
Full compliance with the law: Adherence to all applicable environmental regulations and other requirements to which the company has committed itself.
Education: Building environmental awareness among employees through training and information campaigns. Each Celiko employee knows the environmental impact of their job.
Prevention: Applying a preventive approach to avoid environmental incidents.

Continuous Improvement

This Environmental Policy is regularly reviewed and updated. We set measurable environmental goals, for which we are accountable to our partners and customers, striving to reduce the negative impact on the environment.
In light of the growing ecological awareness in the company’s operating environment, the Management Board considers it a priority to raise this awareness among its employees. We will pay particular attention to improving the energy efficiency of our facility and minimizing its negative impact on various components of the natural environment.
Celiko will strive to continuously improve the quality of its products in an environmentally friendly manner and in compliance with applicable legal requirements regarding environmental protection in the broadest sense.
